GLP S.r.l.
Piazzale Cavedalis 6/2
33100 Udine (IT)

(54) System for managing attraction admission

(57) A system for the real time adjustment of the flow of customers to one or more particular attractions (22), thereby permitting optimization of the capacity of the attraction with the demand of customers comprises a first queue (24) by which said customer may access said particular attraction by waiting in line, a second queue (26) by which said customer may access said particular attraction (22) in a manner which avoids the first queue (24), as well as a first validator (32) for validating an entitlement of said customer to access the second queue (26). The system further comprises a controller (44) for unilaterally determining, generating and issuing an assigned range of time at which said customer may access said particular attraction (22) via the second queue (26), wherein said controller (44) comprises a processor for determining at one or more times, a real time operating capacity of said attraction, said processor providing data about said real time operating capacity to said system for generating said assigned range of time, a data storage device for storing data regarding times previously assigned to customers and wherein said system is arranged to permit or deny validation of said customer to entitlement to an assigned time based on said stored data, and a second validator (34, 42) for permitting the entitled customer access to assigned attraction (22) at the assigned range of time.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 03 00 2935

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on. The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
